WORK EXPERIENCE

Software Engineer, *FlexReceipts*   *Apr. 2017 - Current*

    Design, implement, test, and document code in Java, Spring, Docker, and AWS.

    Lead regular meetings to address and triage issues faced by other teams.

Front End Engineer, *UpWork (Freelance)*   *Jan. 2017 - Apr. 2017*

    Developed client specific UI based applications in Electron, Node, and React.

    Architected solutions, ran scrum sessions, invoiced clients.

Diagnostics Engineering Intern, *Apple Inc.*   *Jan. 2015 - Aug. 2015*

    Wrote QA diagnostics for iPhones in Matlab, Lua, and Objective-C.

    Developed a diagnostics data collection tool to gather field data.

PERSONAL PROJECTS

bitcoinbuyornot.com   *Angular / Node*

    Web app which displays technical indicators against the price of bitcoin.

    API which exposes technical indicators, updated every five minutes.

Task-based Time Tracker   *Electron / React / Redmine API*

    Electron/React app for keeping track of hours spent on redmine tasks.

    Used personally to improve time tracking accuracy while avoiding tedium.

callstak.co   *Twilio / Node*

    Intelligent business phone service focused on closing inbound sales calls.

    Uses twilio to faciliate parallel calls and trigger missed call flows.

EDUCATION

University of Pennsylvania, *School of Engineering*   *Aug. 2012 - Dec. 2016*

    B.S.E. in Computer Science   Philadelphia, PA

Miami Dade College, *Kendall Campus*   *Aug. 2010 - May 2012*

    A.A. in General Studies   Miami, FL
